TOP GRES FINITURA OPACA COMPLETI DI FORO RUBINETTO E FORO LAVABO

Gres top Matt finish, complete with tap hole and washbasin hole - Plan de toilette gres finition mate, complète avec trou de robinet et trou de lavabo

Gres deriva da una miscela di acqua e argilla. Si trasforma attraverso il processo di estrusione a crudo in una lastra dalle straordinarie caratteristiche meccaniche. L'esclusivo processo di trasformazione dell'argilla cruda conferisce maggiore coesione alla materia e permette di ottenere una lastra di spessore 3 mm.

La vetrificazione poi assicura resistenza massima all'assorbimento d'acqua poichè chiude i pori della materia, quindi alta resistenza alle macchie. Essendo un prodotto resistente a qualsiasi sostanza, non presenta particolari precauzioni nelle manutenzioni. Il consiglio rimane comunque un sapone neutro diluito in acqua.

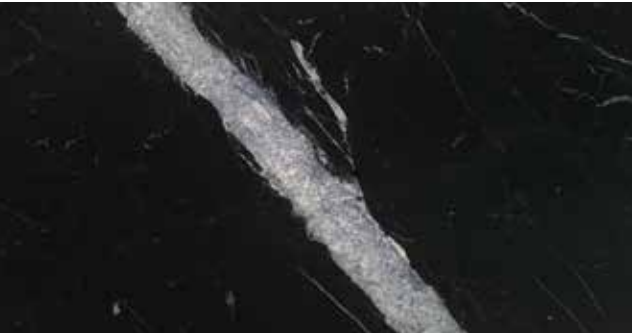

Gres is created from a mixture of water and clay, which are transformed, via a process of extrusion, into a slab with exceptional mechanical properties. The transformation process of the raw clay makes the material more cohesive, obtaining a slab measuring 3 mm thick. A process of vitrification then ensures the material is fully resistant to water and stains, as it closes the pores. Resistant to any substance, this material does not require any special maintenance. A neutral detergent diluted in water is recommended for cleaning.

Gres dérive d'un mélange d'eau et d'argile. Il se transforme à travers le processus d'extrusion à cru en une plaque aux extraordinaires caractéristiques mécaniques. L'exclusif processus de transformation de l'argile crue donne une cohésion supérieure à la matière et permet d'obtenir une plaque de 3 mm d'épaisseur.

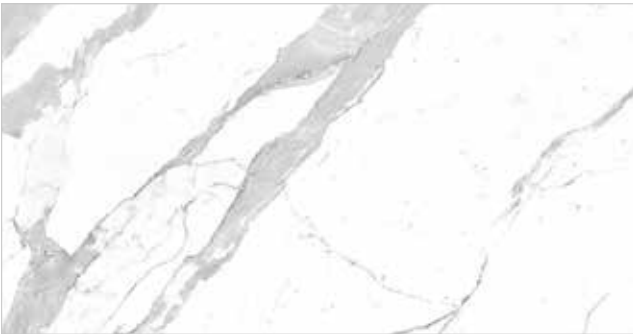

Ensuite, la vitrification assure une résistance maximale à l'absorption d'eau car il ferme les pores de la matière, et par conséquent haute résistance aux taches. Étant un produit résistant a toute substance, il ne présente pas de précautions particulières pour l'entretien. Le conseil reste dans tous les cas un savon neutre dilué avec de l'eau.
